Figure A1: CD spread with Savings, Interest Checking and Money Market Rates
This figure plots the aggregate spread of average bank-level Certificate of Deposit (CD) rates w.r.t. money market account rate, savings account rate and checking account rate respectively at the bank level weighted by bank-quarter level deposits. Bank-quarter level CD rates, money market rates, checking and savings rates are sourced from S\&P Global's RateWatch deposits dataset. The Effective Federal Funds Rate (EFFR), Target Federal Funds Rate (TFFR) and Interest on Reserves (IOR) are sourced from FRED. The vertical lines correspond to the beginning of the different Federal Reserve QE / QT phases: (1) Nov 2008 (QE I), (2) Nov 2010 (QE II), (3) Nov 2012 (QE III), (4) Oct 2014 (Post-QE III), (5) QT period, (6) Sept 2019 (Pandemic QE).

## Table A1: OLS Regressions for Table 9

The table shows OLS tegressions of 3, 12, 18 and 24-month CD - savings rate spread against bank-level Ln(Total Deposits) and Ln(Reserves). CD and savings rates are sourced from S\&P Global's RateWatch deposit data. Banklevel variables are sourced from FDIC's Call Reports data. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). Total Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200. Panel A shows the results for the QE I-III+ Pandemic QE periods. Panel B shows results for QE I-III and Post-QE-III+QT periods. All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. The sample period is 2001 Q1 - 2021 Q4. * p<0.1,

## Table A2: Summary Statistics

## Panel A: Time Series

This table shows descriptive statistics for our time-series variables. Demand deposits is the sum of demand and other liquid deposits from the H. 6 release. Time deposits is the sum of small and large time deposits (H6 and H8 release). All changes are calculated over a 12-month period. Change in $\operatorname{Ln}$ (Reserves) is the 12-month change in the natural logarithm of reserves, $\operatorname{Ln}$ (Reserves)t-12 is the 12 -month lag of $\operatorname{Ln}$ (Reserves). Change in Reserves is the 12 -month change in the level of reserves and Reservest-12 is the corresponding 12-month lagged variable. EFFR-IOR is the Effective Federal Fund Rate (EFFR) minus Interest on Reserves (IOR) on reserve, deposits and credit lines. Ln (Reserves) is the natural logarithm of reserves from the H. 6 release, Ln (Demand Deposits) is the natural logarithm of the sum of demand and other liquid deposits from the H. 6 release. Ln(Time Deposits) is the sum of small and large time deposits (H6 and H8 release). Ln (Credit Lines) is the natural logarithm of unused (other) loan commitments from FDIC insured banks (including corporate credit lines but not credit card commitments). Ln(Usage) is the natural logarithm of quarterly drawn credit lines of U.S. publicly listed firms sourced from Capital IQ.

## Panel B: Bank-level Variables

The table shows summary statistics of bank-level variables constructed from Call Reports and S\&P Global's RateWatch database. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). $\Delta \mathrm{Ln}$ (Reserves) and $\Delta \mathrm{Ln}$ (Deposits) are the year-on-year change of quarterly-levels. 3, 1218 and 24 month Certificate of Deposits (CD) spreads w.r.t Savings Deposit Rates is calculated at the bank-quarter level from S\&P Global's RateWatch data. The reserve instrument i.e. Growth in Aggregate Reserves is the quarter-on-quarter growth in the Reserve Balances of the Federal Reserve Bank. Reserve Share is the ratio of bank-level Reserves to Aggregate Reserves. The County Deposit Growth Instrument is the log of the ratio of contemporary to one-quarter lagged level of total county deposits summed across all the counties the bank has a presence. $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$.

## Panel C: Credit Lines Quantities and Pricing

Bank Balance Sheet Data is sourced from Consolidated Reports of Condition and Income for a Bank with Domestic and Foreign Offices (Call Reports) of the FDIC. Reserves are cash and balances from Federal Reserve Banks at the consolidated bank-level (RCFD0090). Credit lines are credit line originations from the Refinitive LoanConnector database. $\Delta \operatorname{Ln}$ (Credit Lines) is the change in the amount of originated credit lines of investment-grade and unrated firms in the U.S. The instrument for credit lines, $z_{i t}^{C L}$ (henceforth, Credit Line Instrument) is the Ln(Credit Lines) it- $^{\text {( }}$ $x E L P_{t-1}$. The instrument for reserves $z_{i t}^{R}$ is defined as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over past four quarters. Aggregate Reserves are sourced from FRED. AISD/AISU-ratio is the ratio for credit lines originated to investment-grade and unrated firms in the U.S

## Table A3: Summary Statistics by Above/Below Median IV

Panel A: Split by Above/Below Median Reserves Instrument
The table below shows the summary statistics of bank-level variables split by whether the bank's reserve instrument value lies above or below the across-sample median. The reserve instrument is defined as the Growth in Aggregate Reserves x Lagged Reserve share, averaged over previous four quarters. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). $\Delta \mathrm{Ln}$ (Reserves) and $\Delta \operatorname{Ln}$ (Deposits) are the year-on-year change of quarterly-levels. 3, 1218 and 24 month Certificate of Deposits (CD) spreads w.r.t Savings Deposit Rates is calculated at the bank-quarter level from S\&P Global's RateWatch data. The reserve instrument i.e. Growth in Aggregate Reserves is the quarter-on-quarter growth in the Reserve Balances of the Federal Reserve Bank. Reserve Share is the ratio of bank-level Reserves to Aggregate Reserves. The County Deposit Growth Instrument is the log of the ratio of contemporary to one-quarter lagged level of total county deposits summed across all the counties the bank has a presence. $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$.

## Panel B: Above/Below Median Deposit Instrument

The table below shows the summary statistics of bank-level variables split by whether the bank's deposit instrument value lies above or below the across-sample median. The deposit instrument is defined as the log of the ratio of contemporary to one-quarter lagged level of total county deposits summed across all the counties the bank has a presence. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). $\Delta \operatorname{Ln}$ (Reserves) and $\Delta \mathrm{Ln}$ (Deposits) are the year-on-year change of quarterly-levels. 3, 1218 and 24 month Certificate of Deposits (CD) spreads w.r.t Savings Deposit Rates is calculated at the bank-quarter level from S\&P Global's RateWatch data. The reserve instrument i.e. Growth in Aggregate Reserves is the quarter-on-quarter growth in the Reserve Balances of the Federal Reserve Bank. Reserve Share is the ratio of bank-level Reserves to Aggregate Reserves. The County Deposit Growth Instrument is the log of the ratio of contemporary to one-quarter lagged level of total county deposits summed across all the counties the bank has a presence. $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$.

## Panel C: Above/Below Median Reserve Instrument at BHC level

The table below shows the summary statistics of BHC-level variables split by whether the bank's reserve instrument value lies above or below the across-sample median. The reserve instrument is defined as the Growth in Aggregate Reserves x Lagged Reserve share, averaged over previous four quarters. Bank Balance Sheet Data is sourced from Consolidated Reports of Condition and Income for a Bank with Domestic and Foreign Offices (Call Reports) of the FDIC. Reserves are cash and balances from Federal Reserve Banks at the consolidated bank-level (RCFD0090). Credit lines are credit line originations from the Refinitive LoanConnector database. $\Delta \operatorname{Ln}$ (Credit Lines) is the change in the amount of originated credit lines of investment-grade and unrated firms in the U.S. The instrument for credit lines, $z_{i t}^{C L}$ (henceforth, Credit Line Instrument) is the Ln(Credit Lines) ${ }_{i t-1} x E L P_{t-1}$. The instrument for reserves $z_{i t}^{R}$ is defined as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over past four quarters. Aggregate Reserves are sourced from FRED. AISD/AISU-ratio is the ratio for credit lines originated to investment-grade and unrated firms in the U.S.

Panel D: Above/Below Median Credit Lines Instrument at BHC level The table below shows the summary statistics of bank-level variables split by whether the bank's deposit instrument value lies above or below the across-sample median. The deposit instrument is defined as the log of the ratio of contemporary to one-quarter lagged level of total county deposits summed across all the counties the bank has a presence. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Bank Balance Sheet Data is sourced from Consolidated Reports of Condition and Income for a Bank with Domestic and Foreign Offices (Call Reports) of the FDIC. Reserves are cash and balances from Federal Reserve Banks at the consolidated bank-level (RCFD0090). Credit lines are credit line originations from the Refinitive LoanConnector database. $\Delta L n$ (Credit Lines) is the change in the amount of originated credit lines of investment-grade and unrated firms in the U.S. The instrument for credit lines, $z_{i t}^{C L}$ (henceforth, Credit Line Instrument) is the Ln(Credit Lines) $i_{i-1} x E L P_{t-1}$. The instrument for reserves $z_{i t}^{R}$ is defined as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over past four quarters. Aggregate Reserves are sourced from FRED. $A I S D / A I S U$-ratio is the ratio for credit lines originated to investment-grade and unrated firms in the U.S.

Table A4: Deposit \& Credit Line Quantities 2-SLS with Alternate Reserves Instrument
The table represents the first-stage and second-stage results of deposit quantities using an alternate reserves instrument. The reserve instrument used here is $\operatorname{Ln}$ (Aggregate Reserves ${ }_{t} /$ Aggregate Reserves $\left._{t-4}\right) \times$ Reserve Share ${ }_{t-1}\left(z^{\text {Ralt }}{ }_{t i}\right)$.. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Aggregate Reserves is taken from FRED. Panel A reports the $1{ }^{\text {st }}$ Stage of the endogenous regressor $\Delta \mathrm{Ln}$ (Reserves) and the $2^{\text {nd }}$ Stage with $\Delta \mathrm{Ln}$ (Total Deposits). Panel B reports the $2^{\text {nd }}$ Stage with $\Delta \mathrm{Ln}($ Demand and Savings deposits )(RCON2210+RCON6810+RCON0352 of Call Reports) and $\Delta \mathrm{Ln}$ (Time Deposits) (RCON6648 + RCONJ473 + RCONJ474) or (RCON6648 + RCON2604) $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$. All specifications control for Time-Fixed Effects. Standard errors are two-way clustered at the bank and quarter level. Columns (1) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Columns (2) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) show results for the Post-QE III + QT period 2014Q4-2019Q * p $<0.1,{ }^{* *} \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

## Panel C: $1^{\text {st }}$ Stage Credit Line Results

This table shows the first stage results of the instrumental variable two-stage least-squares regressions in Panel D. Reserves is aggregated to the bank holding company (BHC) level from Call Reports, in particular, as. cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). The instrument for reserves, is defined as $\operatorname{Ln}\left(\right.$ Aggregate Reserves $t /$ Aggregate Reserves $\left.{ }_{t-4}\right) \times$ Reserve Share ${ }_{t-1}$ ). Aggregate Reserves are sourced from FRED. Column (1) represents the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Column (2) represents QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Column (3) represents the QEI-III period: 2008Q4-2014Q3. Column (4) shows results for the Post-QE III + QT period: 2014Q4-2019Q3. All specifications contain time fixed effects. Standard errors are two-way clustered at the bank and time level. * $\mathrm{p}<0.1, * * \mathrm{p}<0.05, * * *$ $\mathrm{p}<0.01$

Panel D: $2^{\text {nd }}$ Stage Results with Ln(Credit Lines) as the $2^{\text {nd }}$ Stage Dependent variable The table shows OLS and the second-stage of 2SLS IV regressions of the change in the amount of originated credit lines $\Delta \operatorname{Ln}$ (Credit Lines)) of investment-grade and unrated firms in the U.S. as the dependent variable against change in bank's reserve holdings aggregated to the BHC level. Reserve data is sourced from FDIC's Call Reports, credit line originations from the Refinitive LoanConnector database. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090). Change is the contemporary level minus the deposit level lagged by 4 quarters. All specifications control for time-FE. Columns (1) represent the regressions on the overall sample ranging 2001 Q1-2021 Q4. Columns (2) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) show results for the Post-QE III + QT period: 2014Q4-2019Q3. We report the second stage where $\Delta \operatorname{Ln}$ (Reserves) is instrumented by Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters (zRit . Standard errors are two-way clustered at the bank and time or at the time level (second stage). Newey West SEs correcting for autocorrelation up to four quarters are also reported in Panel A. ${ }^{*} \mathrm{p}<0.1, * * \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

## Table A5: First-Stage for Deposit Rate Spread Regressions with Alternate Reserves Instrument

The table represents the first-stage regressions in the 2SLS IV regression of Deposit Spreads with the Reserve Instrument replaced with the alternate reserve instrument - Ln(Aggregate Reserves /Aggregate Reserves $\left.{ }_{t-4}\right) \times$ Reserve Share $t-1\left(z^{\text {Ralt }}\right.$ it). Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Aggregate Reserves is taken from FRED. The County Deposit Growth Instrument (z ${ }^{D}{ }_{i}$ ) is the log of the ratio of contemporary to one-quarter lagged level of total county deposits summed across all the counties the bank has a presence. Columns (1) \& (5) represent the regressions on the overall sample ranging 2001 Q1-2021 Q4. Columns (2) \& (6) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) \& (7) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) \& (8) show results for the Post-QE III + QT period 2014Q4-2019Q3. We control for bank and time-fixed effects. Standard errors are two-way clustered at the bank and time level. ${ }^{*} \mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05$, ${ }^{* * *} \mathrm{p}<0.01$
$\left.\begin{array}{lcccccccc}\hline & \begin{array}{c}(1) \\ \text { Ln(Total } \\ \text { Deposits) }\end{array} & \begin{array}{c}(2) \\ \text { Ln(Total } \\ \text { Deposits) }\end{array} & \begin{array}{c}(3) \\ \text { Ln(Total } \\ \text { Deposits) }\end{array} & \begin{array}{c}(4) \\ \text { Ln(Total } \\ \text { Deposits) }\end{array} & \begin{array}{c}(5) \\ \text { Ln(Reserves) }\end{array} & \begin{array}{c}\text { (6) } \\ \text { Ln(Reserves) }\end{array} & \begin{array}{c}\text { (7) } \\ \text { Ln(Reserves) }\end{array} \\ \text { Ln(Reserves) }\end{array}\right]$

## Table A6: Deposit Spread \& Credit Line Costs: Second Stage Regressions with Alternate Reserves Instruments

The table shows $2^{\text {nd }}$ stage of 2SLS IV regressions of 3, 12, 18 and 24-month $C D$ - savings spread against bank-level Ln(Total Deposits) and Ln(Reserves). CD and savings rates are sourced from S\&P Global's RateWatch deposit data. Bank-level variables are sourced from FDIC's Call Reports data. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). Total Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200). Panel A shows the OLS regression. Panel B shows the IV regression with Ln(Total Deposits) instrumented with the County Deposit Growth Instrument ( $z^{D}{ }_{i t}$ ) and Ln(Reserves) instrumented with $\operatorname{Ln}\left(\right.$ Aggregate Reserves ${ }_{t} /$ Aggregate Reserves $\left.{ }_{t-4}\right) \times$ Reserve Share $_{t-1}\left(z^{\text {Ralt }}{ }_{i t}\right.$. Panel A shows the second stage results for the Overall and QE I-III+ Pandemic QE periods. Panel B shows results for QE I-III and Post-QE-III+QT periods. All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. The sample period is $2001 \mathrm{Q} 1-2021$ Q4. * $\mathrm{p}<0.1$, ${ }^{* *} \mathrm{p}<0.05$, ${ }^{* * *} \mathrm{p}<0.01$

## Panel C: First stage credit lines

This table shows the first stage results of the instrumental variable two-stage least-squares regressions in Table 11. Bank Balance Sheet Data is sourced from Consolidated Reports of Condition and Income for a Bank with Domestic and Foreign Offices (Call Reports) of the FDIC. Reserves are cash and balances from Federal Reserve Banks at the consolidated bank-level (RCFD0090). Credit lines are credit line originations from the Refinitive LoanConnector database. The instrument for credit lines, $z_{i t}^{C L}$ (henceforth, Credit Line Instrument) is the $L n(\text { Credit Lines })_{i t-1} x E L P_{t-1}$. Reserve Instrument is replaced with the alternate reserve instrument - Ln(Aggregate Reserves $/$ /Aggregate Reserves $\left.{ }_{t-4}\right) \times$ Reserve Share $_{t-1}\left(z^{\text {Ralt }}{ }_{i t}\right.$. Columns (1) \& (5) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Columns (2) \& (6) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) \& (7) represent the QEI-III period: 2008Q4-2014Q3We control for bank and time-fixed effects. Standard errors are two-way clustered at the bank and time level. * $\mathrm{p}<0.1, * * \mathrm{p}<0.05, * * * \mathrm{p}<0.01$

## Panel D: Second stage with AISD/AISU-ratio as dependent variable with Alternate Reserves Instruments

The table shows the second-stage of 2SLS IV regressions of the price of credit lines measured as the AISD/AISU-ratio of credit lines originated to investment-grade and unrated firms in the U.S. as the dependent variable on a bank's reserve holdings and credit lines aggregated to the BHC level. Reserve data is sourced from FDIC's Call Reports, credit line originations from the Refinitive LoanConnector database. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 The instrument for credit lines is the Ln(Credit Lines) it-l $x$ $E L P_{t-1 .}$. Reserve Instrument is replaced with the alternate reserve instrument - Ln(Aggregate Reserves t/Aggregate Reserves $\left.{ }_{t-4}\right) \times$ Reserve Share ${ }_{t-1}\left(z^{\text {Ralt }} i t\right)$. Column (1) represent the regressions on the overall sample ranging $2001 \mathrm{Q} 1-$ 2021 Q4. Column (2) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Column (3) represent the QEI-III period: 2008Q4-2014Q3. Column (4) show results for the Post-QE III + QT period: 2014Q4-2019Q3. $\underline{\text { Standard errors are two-way clustered at the bank and time level. }{ }^{*} \mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05 \text {, }{ }^{* * *} \mathrm{p}<0.01}$

## Panel E: Second stage with AISD/AISU-ratio as dependent variable with Alternate Credit Line Instruments

The table shows the second-stage of 2SLS IV regressions of the price of credit lines measured as the AISD/AISU-ratio of credit lines originated to investment-grade and unrated firms in the U.S. as the dependent variable on a bank's reserve holdings and credit lines aggregated to the BHC level. Reserve data is sourced from FDIC's Call Reports, credit line originations from the Refinitive LoanConnector database. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 The alternative instrument for credit lines is the Ln(Credit Lines) ${ }_{i t-1} x E B P_{t-1 .}$. Reserve Instrument is as defined above. Column (1) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Column (2) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Column (3) represent the QEI-III period: 2008Q4-2014Q3. Column (4) show results for the Post-QE III + QT period: 2014Q4-2019Q3. ## Table A7: Alternate Deposit Instruments - Senior Share Instrument

The table represents the first-stage regressions in the 2SLS IV regression of Deposit Spreads with the Deposit Instrument replaced with the Senior Share Instrument
 population above 65 years of age from Census Bureau data. County-level deposits are estimated from FDIC's Summary of Deposits. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Reserves instrument is defined as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Aggregate Reserves is taken from FRED. Columns (1) \& (5) represent the regressions on the overall sample ranging 2001 Q1-2021 Q4. Columns (2) \& (6) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) \& (7) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) \& (8) show results for the Post-QE III + QT period 2014Q4-2019Q3. We control for bank and time-fixed effects. Standard errors are two-way clustered at the bank and time level. * $\mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

## Table A8: Deposit Spread Secon Stage Results with Senior Share Instrument

The table shows $2^{\text {nd }}$ stage of 2SLS IV regressions of 3,12, 18 and 24-month $C D$ - savings spread against bank-level Ln(Total Deposits) and Ln(Reserves). CD and savings rates are sourced from $S \& P$ Global's RateWatch deposit data. Bank-level variables are sourced from FDIC's Call Reports data. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). Total Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200). Panel A shows the OLS regression. Panel B shows the IV regression with Ln(Total Deposits) instrumented with the Senior Share Instrument (z $z^{\text {Dss }}{ }_{i t}$ ) and Ln(Reserves) instrumented with as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Aggregate Reserves is taken from FRED. Panel A shows the second stage results for the Overall and QE I-III+ Pandemic QE periods. Panel B shows results for QE I-III and Post-QE-III+QT periods. All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. The sample period is 2001 Q1 - 2021 Q4. ${ }^{*} \mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

## Table A9: Alternate Deposit Instruments - Small Business Administration (SBA) Disaster Assistance Instrument

The table represents the first-stage regressions in the 2SLS IV regression of Deposit Spreads with the Deposit Instrument replaced with the SBA Disaster Assistance Instrument defined as $z_{i t}^{\text {Dsba }}=\ln \left(\sum_{z \in Z_{i t}}\right.$ Loss $\left._{z t} \times \frac{\text { Bank Zip Share }_{i z t_{0}}}{\sum_{z \in Z_{i t}} \text { Bank Zip Share }_{i z t_{0}}}\right)$, where $Z_{i t}$ is the set of all zips bank i has presence in and $\mathrm{t}_{0}$ is the earliest year of bank's presence in the zip in the Summary of Deposit sample starting 2000q1. Loss is the zip-level perceived loss for which SBA disaster assistance is requested. Bank Zip Share is the ratio of bank i's deposits in zip z to the Total Deposits of the bank. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Reserves instrument is defined as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Aggregate Reserves is taken from FRED. Columns (1) \& (5) represent the regressions on the overall sample ranging 2001 Q1-2021 Q4. Columns (2) \& (6) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) \& (7) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) \& (8) show results for the Post-QE III + QT period 2014Q4-2019Q3. We control for bank and time-fixed effects. Standard errors are two-way clustered at the bank and time level. * $\mathrm{p}<0.1, * * \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

Table A10: $2^{\text {nd }}$ Stage Results Alternate Deposit Instruments - SBA Disaster Assistance
The table shows $2^{\text {nd }}$ stage of 2SLS IV regressions of 3, 12, 18 and 24-month $C D$ - savings spread against bank-level Ln(Total Deposits) and Ln(Reserves). CD and savings rates are sourced from $S \& P$ Global's RateWatch deposit data. Bank-level variables are sourced from FDIC's Call Reports data. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). Total Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200). Panel A shows the OLS regression. Panel B shows the IV regression with Ln(Total Deposits) instrumented with the SBA Disaster Assistance Instrument ( $z^{\text {Dsba }}{ }_{i t}$ ) and Ln(Reserves) instrumented with as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Aggregate Reserves is taken from FRED. Panel A shows the second stage results for the Overall and QE I-III+ Pandemic QE periods. Panel B shows results for QE I-III and Post-QE-III+QT periods. All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. The sample period is $2001 \mathrm{Q} 1-2021$ Q4. * $\mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05$, *** $\mathrm{p}<0.01$

## Table A12: Deposit Quantities - Heterogeneity by Assets

The table represents the second-stage results of deposit quantities regression split by above/below $90^{\text {th }}$ percentile of bank assets (RCFD2170). The reserve instrument used here is Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Aggregate Reserves is taken from FRED. Panel A reports the $2^{\text {nd }}$ Stage with $\Delta \operatorname{Ln}$ (Total Deposits). Panel B reports the $2^{\text {nd }}$ Stage with $\Delta \operatorname{Ln}$ (Demand and Savings deposits )(RCON2210+RCON6810+RCON0352 of Call Reports) and Panel C with $\Delta \operatorname{Ln}$ (Time Deposits) (RCON6648 + RCONJ473 + RCONJ474) or (RCON6648 + RCON2604) $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$. All specifications control for Time-Fixed Effects. Standard errors are two-way clustered at the bank and quarter level. Columns (1) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Columns (2) represent QE I-III + Pandemic QE of 2008Q4 - 2014Q3 \& 2019Q4-2021Q4. Columns (3) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) show results for the Post-QE III + QT period 2014Q4-2019Q * $\mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05$, ${ }^{* * *} \mathrm{p}<0.01$

## Table A13: Deposit Rate Spreads - Heterogeneity by Assets

The table shows $2^{\text {nd }}$ stage of 2SLS IV regressions of 3, 12, 18 and 24-month $C D$ - savings rate spread against banklevel Ln(Total Deposits) and Ln(Reserves) split by above/below $90^{\text {th }}$ Percentile bank assets (RCFD2170). CD and savings rates are sourced from S\&P Global's RateWatch deposit data. Bank-level variables are sourced from FDIC's Call Reports data. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). Total Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200). Panel A shows the OLS regression. Panel B shows the IV regression with Ln(Total Deposits) instrumented with the County Deposit Growth Instrument ( $z^{D}{ }_{i t}$ ) and Ln(Reserves) instrumented with as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Aggregate Reserves is taken from FRED. Panel A shows the second stage results for the Overall period, Panel B for QE I-III+ Pandemic QE periods Panel C shows results for QE I-III and Panel D shows results for Post-QE-III+QT periods. All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. The sample period is $2001 \mathrm{Q} 1-2021$ Q4. ${ }^{*} \mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

## Table A14: Deposit Quantities - Heterogeneity by Equity/Assets Ratio

The table represents the second-stage results of deposit quantities regression split by above/below median of bank equity/assets (RCFD3210/RCFD2170). The reserve instrument used here is Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Total Deposits is the sum of Total Domestic and Foreign Deposits held at the depository level (RCON2200+RCFN2200 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Aggregate Reserves is taken from FRED. Panel A reports the $2^{\text {nd }}$ Stage with $\Delta \operatorname{Ln}$ (Total Deposits). Panel B reports the $2^{\text {nd }}$ Stage with $\Delta \operatorname{Ln}(D e m a n d$ and Savings deposits $)($ RCON2210 + RCON6810 +RCON 0352 of Call Reports) and Panel C with $\Delta \mathrm{Ln}($ Time Deposits) (RCON6648 + RCONJ473 + RCONJ474) or (RCON6648+RCON2604) $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$. All specifications control for Time-Fixed Effects. Standard errors are two-way clustered at the bank and quarter level. Columns (1) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Columns (2) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) show results for the Post-QE III + QT period 2014Q4-2019Q * $\mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05$, ${ }^{* * *} \mathrm{p}<0.01$

## Table A15: Deposit Rate Spread - Heterogeneity by Equity/Assets Ratio

The table shows $2^{\text {nd }}$ stage of 2SLS IV regressions of 3, 12, 18 and 24-month $C D$ - savings rate spread against banklevel Ln(Total Deposits) and Ln(Reserves) split by above/below median equity/assets (RCFD3210/RCFD2170). CD and savings rates are sourced from $S \& P$ Global's RateWatch deposit data. Bank-level variables are sourced from FDIC's Call Reports data. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank level (RCFD0090). Total Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200). Panel A shows the OLS regression. Panel B shows the IV regression with Ln(Total Deposits) instrumented with the County Deposit Growth Instrument ( $z^{D}{ }_{i t}$ ) and Ln(Reserves) instrumented with as Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Aggregate Reserves is taken from FRED. Panel A shows the second stage results for the Overall period, Panel B for QE I-III+ Pandemic QE periods Panel C shows results for QE I-III and Panel D shows results for Post-QE-III+QT periods. All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. The sample period is $2001 \mathrm{Q} 1-2021$ Q4. ${ }^{*} \mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05,{ }^{* * *} \mathrm{p}<0.01$

## Table A16: Loan Quantities - Impact due to Exogenous Increase in Bank Reserves

The table represents the second-stage results of loan quantities regression The reserve instrument used here is Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters. Total Loans is the sum of Loans and leases held for sale and loans and leases net of unearned income (RCFD5369+RCFDB528 of Call Reports). Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090 of Call Reports). Aggregate Reserves is taken from FRED. $\Delta \mathrm{Y}_{\mathrm{it}}=\mathrm{Y}_{\mathrm{it}}-\mathrm{Y}_{\mathrm{it}-4}$. All specifications control for Time-Fixed Effects. Standard errors are two-way clustered at the bank and quarter level. Columns (1) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Columns (2) represent QE I-III + Pandemic QE of 2008Q4 - 2014Q3 \& 2019Q4-2021Q4. Columns (3) represent the QEI-III period: 2008Q4-2014Q3. Columns (4) show results for the PostQE III + QT period 2014Q4-2019Q * p $<0.1,{ }^{* *} \mathrm{p}<0.05$, ${ }^{* * *} \mathrm{p}<0.01$

## Table A17: Uninsured vs. Insured Deposits

The table represents the second-stage results of insured and uninsured time and non-time deposits. Estimation of Insured and Uninsured Domestic Deposits are based on the items in the call report schedule RC-O. Insured deposits are defined as deposits lying below the FDIC deposit insurance thresholds of $\$ 100,000$ before 2008Q4 and \$250,000 after 2008Q4. Uninsured deposits are domestic deposits above the aforementioned deposit insurance thresholds and all foreign deposits. Insured deposits are adjusted for the FDIC Transaction Account Guarantee (TAG) program. Split of Time Deposits into Insured vs. Uninsured Deposits are based by splits of Time Deposits by the aforementioned deposit insurance thresholds in schedule RC-E. Non-time Insured and Uninsured deposits are estimated by taking the difference of Total Insured/Uninsured Deposits and Insured/Uninsured Time Deposits respectively. Panel A shows the result for Insured Time Deposits, Panel B for Insured Non-Time Deposits, Panel C for Uninsured Time Deposits and Panel D for Uninsured Non-Time Deposits. All specifications control for Time-Fixed Effects. Standard errors are two-way clustered at the bank and quarter level. Columns (1) represent the regressions on the overall sample ranging 2001 Q1 - 2021 Q4. Columns (2) represent QE I-III + Pandemic QE of 2008Q4-2014Q3 \& 2019Q4-2021Q4. Columns (3) represent the QEI-III period: 2008Q4-2014Q3. ## Table A18: Deposit Quantities Regression (Table 4) Splits by Sub-period

The table the second-stage of 2SLS IV regressions of $\Delta L n$ (Total Deposits) as the dependent variable against $\Delta L n$ (Reserves). Deposit and reserve data are sourced from FDIC's Call Reports. Panel A uses Total Deposits defined as the total deposits held in domestic and foreign offices (RCON2200+RCFN2200). Panel B uses the Ln(Demand and Savings deposits )(RCON2210+RCON6810+RCON0352) and Ln(Time Deposits) (RCON6648 + RCONJ473 + RCONJ474) or (RCON6648+RCON2604) as the dependent variables. Reserves are cash and balances due from Federal Reserve Banks at the consolidated bank-level (RCFD0090). $\Delta Y=Y_{t}-Y_{t-4}$. All specifications control for timeFE. Panel A shows the results for $\Delta L n$ (Total Deposits), Panel B shows the corresponding results for $\Delta L n(D e m a n d ~ \& ~$ Savings Deposits) and Panel C for $\Delta L n$ (Time Deposits) as the dependent variable. In all second-stage regressions, $\Delta L n$ (Reserves) is instrumented by the reserve instrument ( $\mathrm{z}^{\mathrm{R}} \mathrm{it}$ ): Growth in Aggregate Reserves $\times$ Average Lagged Share in Reserves over the previous 4 quarters. Standard errors are two-way clustered at the bank and time level.. * $\mathrm{p}<0.1, * * \mathrm{p}<0.05, * * * \mathrm{p}<0.01$

Table A19: Deposit Spreads Regressions (Tables 8 \& 9) by Sub-periods
The table shows the second stage of 2SLS IV regressions of 3, 12, 18 and 24-month $C D$ - savings spreads against bank-level Ln(Total Deposits) and Ln(Reserves) during various sub-sample periods. CD and savings rates are sourced from S\&P Global's RateWatch deposit data. Bank-level variables are sourced from FDIC's Call Reports data. Reserves are cash and balances from Federal Reserve Banks at the consolidated bank level (RCFD0090). Deposits are the sum total of deposits held in domestic and foreign offices (RCON2200 + RCFN2200). Ln(Total Deposits) are instrumented with the Deposit Growth Instrument ( $z^{D}{ }_{i t}$ ) and Ln(Reserves) are instrumented with Growth in Aggregate Reserves $\times$ Lagged Share in Reserves, averaged over previous 4 quarters ( $z^{R}{ }_{i t}$ ). All specifications control for bank and time fixed effects. Standard errors are two-way clustered at the bank and time level. ${ }^{*} \mathrm{p}<0.1,{ }^{* *} \mathrm{p}<0.05$, *** $\mathrm{p}<0.01$
